

# "IF YOU CAN SEE ME. SOMETHING HAS GONE TERRIBLY WRONG" I AM THE RETINA!!

Dear colleagues and friends!!

Retinal diseases are one of the most frequently seen disorders in our OPDs. These encompasses several medical, uveitic and surgical pathologies. This issue of DOS Times is an important knowledge dissemination podium for the researchers, students and medical practitioners. The present issue focuses on different aspects of retinal diseases such as diabetic macular oedema, myopia, vein occlusions, vitreous haemorrhage and endophthalmitis. Various articles on imaging tools also fall under the scope of this issue.

Emerging practices and the experiences in this field needs a critical and thorough discussion to spread the knowledge so that the researchers, ophthalmologists and most importantly residents adopt them to pass on the benefits to the needy. Hence, we have accumulated an amalgam of research articles, review articles, perspectives, techniques, case reports, etc.

I take this opportunity to welcome you all to join the Winter DOS Conference at India Habitat Centre, Delhi from 17th to 18th November, 2018.

Thanks

**Dr. (Prof.) Subhash C. Dadeya**
